Membranous nephropathy (MN) is a kidney-specific autoimmune disease that is a major cause of nephrotic syndrome. Recent guidelines for the management of glomerular diseases have highlighted the importance of anti-PLA2R antibody detection for MN diagnosis, monitoring, and transplant evaluation. In this webinar, Dr. Laurence Beck will introduce the pathogenesis of MN, and highlight the role of anti-PLA2R and other biomarkers in MN diagnosis and monitoring.

SPEAKER:
Laurence Beck, MD, PHD
Associate Professor of Nephrology
Boston University School of Medicine
